

All the power you need – without ever disturbing the fish

Yamaha Electric Drives are the most environment-friendly way to power your small boat when you're out relaxing on the water.

With these neat units, relaxation is the key. There is almost no noise and certainly no exhaust fumes, so you never have to worry about anything disturbing you – or about disturbing anything else, because for keen fishermen and lovers of nature that's the added bonus: a Yamaha Electric Drive won't scare wildlife away. So you can make the most of your day in the great outdoors.

Powered by a compact 12-volt battery, your Yamaha Electric Drive is ultra-portable. Which also makes it perfect for a small tender or dinghy.

- Very simple and light to carry about - and to fit
- Surprisingly powerful - but easy to control
- Tough construction and dependable 12-Volt motor
- Almost indestructible composite prop shaft
- Power propeller resists weeds and trailing debris
- Quick-Cam Depth Adjuster - easy prop depth control
- Extremely friendly to the environment
- Telescoping Tiller

The amazing M12 - Just switch it on and take off

A Yamaha Electric Drive is the most convenient, environment-friendly way to power a small boat - and you may be surprised just how powerful it is.

Incredibly simple and quiet to use, these compact 12-volt units have adjustable brackets for quick, easy fitting, so you can go straight out, switch on and have fun. They are very easy to control, with a conveniently positioned tiller and a comfortable hand grip.

They're built tough too, with permanent magnet motors, damage-resistant casings and coatings, and special composite drive shafts that won't bend, break or corrode in normal use. A power propeller maximises thrust and resists trailing weeds and other underwater debris.

Indestructible composite shaft

Our ultra-high-yield composite shafts are stronger than steel, virtually indestructible and flex on impact, before returning to their original position. They won't kink, break, rust or corrode.

Smooth, cool and quiet power

The extra large windings and commutators dissipate heat, resulting in cooler operation, extended battery power and longer motor life, while the unique bearing system reduces friction to cut fish-spooking noise. You'll be so quiet, they'll never hear you coming.

Prower Props

Delivers extra power to push through heavy vegetation.

A really tough little power partner

As well as its indestructible (almost) composite shaft, the great little M12 outboard is tough in every other sense too - from its hard-working, permanent magnet 12-Volt motor and its hard-wearing, weed-resistant power propeller right down as far as its hard-to-damage casing. In short, it goes where you go. With no drama.

Electric-Drive Technical specs	
Amp Draw	30
Voltage	12
Battery Meter	No
Mount Feature	Lever lock
Speeds (FWD/REV)	5 FWD/3 REV
Max Thrust (kg)	13.6
Digital Maximizer	No
Control	Telescoping Tiller
Shaft Length	762 mm
