

Power to the angler.

It's not just strong for its size. It's sharp, responsive and as unfazed by the elements as the person holding the rod.

Every part works in quiet harmony, from the smooth electric thrust to the durable drive shaft that just keeps going. All you have to think about is your next cast.

Power this quiet turns fishing into an art form. Slip through the shallows unseen and let your silence be the element they never saw coming.

- Sleek design

Built quiet. Driven strong.

When the water's calm, you don't need noise. You need precision. With smooth power delivery, low vibration and serious stamina, this motor keeps you in control, hour after hour. It's built tough, runs cool and never complains about the conditions.

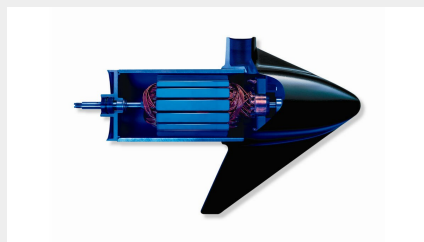

From dawn patrols to late-evening casts, its rugged construction and 12-volt design deliver reliable thrust without drama. A sturdy composite shaft and weed-resistant propeller mean nothing stands between you and the next bite.

It's efficient, unflappable and purpose-built for anglers who prefer stealth over splash. Switch on, settle in and let the silence do the work.

Smooth, cool and quiet power

Smooth, cool and quiet power

A really tough little power partner

Don't let its size fool you. This motor is built to take on the elements, with a near-indestructible composite shaft, a durable 12-volt motor, and a weed-resistant prop that just keeps pushing. From calm coves to choppy shallows, it goes where you go without a whisper of complaint.

Power props

Cut through heavy vegetation and stubborn water resistance with the high-thrust Power Prop. It's designed to deliver extra push exactly when you need it, keeping your boat moving smoothly through the thick of it.

Indestructible composite shaft

Stronger than steel and built to flex on impact, the ultra-tough composite shaft won't kink, rust, or corrode. It takes the hit, then springs back to form, ready for whatever comes next.

Electric-Drive Technical specs	
Amp draw	42
Control	Telescoping Tiller
Battery meter	No
Digital maximizer	No
Maximum thrust (kg)	18.2
Voltage	12
Shaft length	914 mm
Mount feature	Lever lock
Speeds (FWD/REV)	5 FWD/3 REV
