

MX18

Shhh! I'm fishing...

It's proof that intelligence and muscle can share the same casing. This motor reads the water, minds the current and keeps its cool while you chase the catch of the day.

No noise, no fumes. Just you, the water and a machine that works so seamlessly you'll start to wonder if it's doing the thinking for you.

Effortless, efficient, and unmistakably Yamaha. When smart design meets quiet confidence, you get more than a motor. You get momentum.

- Sleek design

Silent and smooth as silk.

Yamaha's Electric Drives have a reputation for reliability, and this one takes it personally. It draws only the power you need, saving the rest for when you really want to show off your staying power. The result is smooth control, less drain on the engine and more time doing what you came for.

The Digital Maximizer technology makes every charge count, stretching your battery life up to five times longer. It's the marine equivalent of finding extra coffee in the pot when you thought it was empty.

Built for those who prefer doing to tinkering, it's as rugged as it is refined. Turn it on, trust it completely and enjoy a day on the water that ends when you decide, not when your power does.

Push-to-test battery meter

One quick press, instant peace of mind. Check your remaining battery life at a glance and stay one step ahead of the water. Smart, simple, and surprisingly satisfying.

Lever lock bracket

A solid 10-position bracket built to last. The quick-release lever lock keeps your motor secure while reinforced composite materials resist flexing, warping, and UV damage. Strong, steady, and ready for the long haul.

Telescoping tiller

Control, tailored to you. The 15 cm telescoping tiller brings comfort, reach, and responsiveness together in one smooth motion. Easy to adjust, easier to enjoy.

Digital Maximizer™

Fish longer, travel further, and use up to five times less power per charge. The Digital Maximizer™ fine-tunes speed and energy draw so every watt works harder for you. It's smart efficiency you can actually feel.

Electric-Drive Technical specs	
Amp draw	42
Control	Telescoping Tiller
Battery meter	Yes
Digital maximizer	Yes
Maximum thrust (kg)	18.2
Voltage	12
Shaft length	914 mm
Mount feature	Lever lock
Speeds (FWD/REV)	Variable
